# ILLUMIC™: Lighting up UAE Nighttime Operations

Canrig installed the ILLUMIC™ lighting system in the UAE for a major customer to improve workers' visibility and illuminate the worksite without relying on traditional diesel-powered light towers.

Installing the ILLUMIC lighting system enabled the rig to save up to 55,440 kWh of energy and 6,930 gallons of fuel in 330 operating days.

This ILLUMIC LED Crown-Mounted Lighting System greatly improved worker visibility during nighttime operations, lowered overall noise on the rigsite, boosted safety and productivity and contributed to reduced emissions and operational costs.
