

PACE® Drilling Rigs

Setting the PACE for Rig Moves

Optimizing rig moves lowers cycle times and increases productivity.

By safely reducing non-productive time associated with rig moves, customers can put more wells in the ground, generate higher returns, and increase cash flow.

Five Keys to Success

Nabors approaches pad-to-pad moves with five priorities in mind:

1. Safety Leadership
2. Strategic Planning
3. Pre-Emptive Work
4. Communication and Coordination
5. Continuous Improvement

Leading the Pack in 2024

Sharpening the focus and process for rig move times has delivered best-in-class performance to our Lower 48 customers across major basins.

In 2024, Nabors is averaging 3.24 days per rig move, with times in West Texas and South Texas averaging sub-3 days.

Avg. Net Move Days by Month
